

Answers: Jupiter

Marking guidance - Value reasoning as well as the selected answer

1 to 4 | Identify

1. Gas giant.
2. Accept a correct location or orbital relationship.
3. Rotation: 9 h 56 min; orbital period: 11.86 years.
4. Temperature: ≈ -110 °C at cloud level; also accept a correct environmental feature.

5 and 6 | Read and compare

5. Each figure needs its unit and measured quantity.
6. The explanation should preserve the meaning of this comparison: About 1,300 Earths could fit inside its volume.

Teaching point

A rounded figure is still a useful estimate. The size of a drawing does not prove that its proportions are correct. A comparison must state its reference.

Answers: check and explain

English learning edition - September 2026

7. A. Io, Europa, Ganymede and Callisto

Galileo observed these four large moons in 1610.

8. A. Juno

Juno has investigated Jupiter's gravity, magnetic field and atmosphere.

9. C. Ganymede

Ganymede, a moon of Jupiter, is even larger than Mercury.

10. B. No, it is a gas giant

Pressure increases gradually through its gaseous outer layers, without a distinct solid surface.

11 to 13 | Quantities and models

11. Accept two units from the table correctly linked to their quantities.

12. Bodies can be enlarged or distances compressed for readability, but this must be stated.

13. Accept accurate similarities and differences supported by a fact sheet or scientific source.

Answers: investigate and write

English learning edition - September 2026

14 | Observation or fact

Accept an accurate sentence describing a checkable characteristic or figure. Do not accept an opinion presented as a fact.

15 | Scientific question

The question should be investigable through observations, measurements, comparisons or a mission. Reward precise, testable wording.

Mini-mission | Suggested marks out of 10

Description of the environment: 0-2.

Three correctly used scientific terms: 0-2.

Clear exploration objective: 0-2.

Plausible mission and coherent account: 0-2.

Between 5 and 7 clear sentences: 0-2.

Adaptation

Accept spoken explanations when appropriate. For further challenge, require data and distinguish observation, interpretation and conclusion.

Sources and limitations
